

SABIR QADAR

Full Stack Developer · Django / Python

Ranchi, Jharkhand, India | [GitHub](#) | [Portfolio](#) | [LinkedIn](#)

PROFILE

Full Stack Developer intern building production Django applications — appointment scheduling, content management, and healthcare booking systems — end to end, from PostgreSQL schema design through deployment on Render. Looking for an SDE or Full Stack role where I can keep shipping real, deployed software.

TECHNICAL SKILLS

Languages: Python, Java, C

Web & Backend: Django, Flask, REST patterns, HTML5, CSS3, Bootstrap

Data & ML: PostgreSQL, MySQL, scikit-learn, NLTK

Tools: Git, GitHub, VS Code, Render (deployment)

Core CS: Data Structures & Algorithms, OOP, DBMS, Computer Networks, OS, SDLC

EXPERIENCE

Full Stack Developer Intern — Codezeal Technology Pvt. Ltd. / BrightCode

June 2026 – Present · Ranchi, Jharkhand

- Built and deployed CareCircle, a full-stack doctor appointment management system using Django, PostgreSQL, and Bootstrap — covering role-based patient/doctor dashboards, AJAX-driven appointment workflows, and prescription management — live on Render.
- Developed a Developer Portfolio CMS on Django + PostgreSQL, giving non-technical users a Django-admin-driven interface to manage project entries and content without touching code.
- Designed relational schemas and query logic connecting backend models to front-end templates, following MVC conventions and Django's URL-routing patterns.
- Collaborated using Git/GitHub with feature branching and peer code review under senior engineer mentorship, following SDLC practices from requirement analysis through iterative testing.

PROJECTS

CareCircle — Full-Stack Doctor Appointment Management System | Django 5, PostgreSQL, Bootstrap 5, Gunicorn [Live Demo](#)

- Architected and shipped a production-grade appointment platform across 8 modular Django apps (accounts, doctor, patient, appointments, prescriptions, reviews, notifications, core), with a custom user model driving role-based dashboards for patients and doctors.
- Built the full booking lifecycle end to end: doctor search/filtering, appointment requests, AJAX-driven accept/reject/complete actions with zero page reloads, structured prescription formsets, and a patient review system — all backed by an in-app notification service.
- Deployed to production on Render with PostgreSQL, Gunicorn, and WhiteNoise; independently diagnosed and resolved real infrastructure issues — WSGI port-binding misconfiguration, environment-variable-driven settings, and idempotent database bootstrapping via custom management commands.

SENTIENT — AI-Powered Sentiment Analyzer | Python, Flask, scikit-learn, NLTK [Repo](#)

- Built an NLP pipeline (TF-IDF vectorization + Naive Bayes) trained on 400,000+ Amazon product reviews for binary sentiment classification.
- Deployed the trained model via a Flask web app for real-time inference, covering the full ML lifecycle from preprocessing through serving.

Employee Management System | Python, MySQL, Tkinter [Repo](#)

- Built a desktop CRUD application over a normalized MySQL schema with a Tkinter GUI for employee record entry, retrieval, and validation.

EDUCATION

Bachelor of Computer Applications (BCA) Jharkhand Rai University, Ranchi

2024 – 2027 (expected) · Currently in 5th Semester · SGPA: [8.00]

ACHIEVEMENTS

- Selected for a Full Stack Development Internship at Codezeal Technology / BrightCode.
- Independently designed, built, and deployed multiple full-stack and cybersecurity-adjacent projects, maintained on an active GitHub portfolio.
